1. *Pharmaceuticals*—The pharmaceutical industry is the largest and most profitable of the major industries in the United States. It is a highly competitive industry with a high degree of technological sophistication. The industry is characterized by a high degree of concentration, with a few large firms dominating the market. The industry is also characterized by a high degree of innovation, with new drugs being developed at a rapid pace. The industry is subject to a high degree of regulation, particularly in the area of safety and efficacy. The industry is also subject to a high degree of competition from foreign firms. The industry is a major source of employment in the United States, with over 1 million people working in the industry. The industry is a major contributor to the U.S. economy, with sales of over \$100 billion in 1990. The industry is a major source of research and development, with over \$10 billion spent on research and development in 1990. The industry is a major source of innovation, with new drugs being developed at a rapid pace. The industry is a major source of employment in the United States, with over 1 million people working in the industry. The industry is a major contributor to the U.S. economy, with sales of over \$100 billion in 1990. The industry is a major source of research and development, with over \$10 billion spent on research and development in 1990. 1. *Chlorophyll a* and *Chlorophyll b* were determined using a spectrophotometer (Shimadzu UV-1601) at 663 nm and 646 nm, respectively. The concentration of chlorophyll was calculated using the following equations: $\text{Chlorophyll } a = 12.7 \times \text{OD}_{663} - 2.13 \times \text{OD}_{646}$ and $\text{Chlorophyll } b = 21.6 \times \text{OD}_{646} - 5.1 \times \text{OD}_{663}$ (Arar and Munk, 1985).
